

BiLock SECURITY FOR THE 21st CENTURY

BiLock is a revolutionary **high security** lock system manufactured in Australia under **world-wide patents**. It is distributed in the UK and Ireland by Q-Locks Ltd of London through a selected network of **authorised dealers**. Central support from Q-Locks with extensive shelf stocks and **fully trained staff** and the Australian Lock Company in New South Wales provides end users of BiLock with **complete peace of mind**.

The **BiLock** advantage gives you:

Key Control: Clearly defined and simply manageable control of the making and issue of keys through the use of patented processes and straight forward contractual arrangements.

Identification: Easy identification of keys through the use of integral coloured key heads.

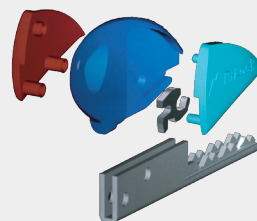

Master Keying: BiLock's twelve pin design copes easily with the most complex master keying requirements.

Wear & Tear: The shape of BiLock pins and key cuts results in fewer problems with new keys in old locks and old keys in new locks.

Fewer Parts: BiLock's revolutionary design has reduced the number of components by about 50%. The result is fewer out-of-stock problems and quicker, more accurate assembly.

Quick Change Core: This unique patented feature allows for immediate, fuss-free re-keying of doors for reorganisation, change of occupier etc. without the need for dismantling.

Price: BiLock cylinders are competitively priced.

THE BiLock ADVANTAGE

BiLock systems are currently used by:

North East Ambulance NHS Trust; Tyne & Wear Fire Brigade; University College Hospitals, London; Sunderland City TEC; Northern Counties Housing Association; The Royal Courts of Justice, London; and many other world renowned companies such as Coca Cola, Bank of America, The Royal Australian Mint & Caesars Palace, Las Vegas

BiLOCK MAXIMUM SECURITY

THE BiLOCK ADVANTAGE

The BiLock range includes the **full complement of cylinder types** - euro, oval, rim, threaded, Scandinavian, Australian, cam and furniture locks, vending machine cylinders, padlocks, switch locks.

BiLock's dual bladed key is unique with an additional **trigger mechanism**. Keys cannot be duplicated: every key is an original, cut to code on dedicated Bilock machines which are available only to con-tracted dealers. Key cutting procedures are strictly controlled by this contract.

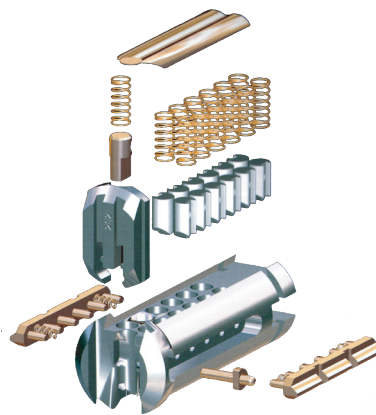

Euro Single

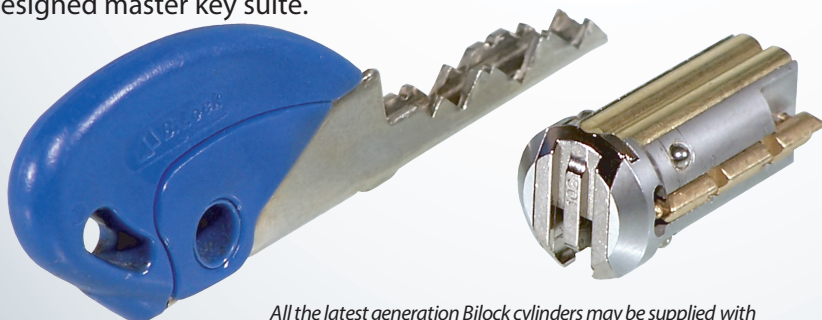

Quick and easy identification of BiLock keys can be achieved through the use of integral coloured key heads, with a choice of over eighteen colours, and literally **thousands of possible colour combinations**. This can be invaluable for **fast recognition of keys** from a large and multi-layered master keyed suite.

Bilock's **twelve pin cylinders** cope routinely with the largest and most complex master keying requirements. Grand Master key systems with hundreds of sub-master suites, common "front door" cylinders, and interchange keying are easily designed on unique computer software on which the incidence of unwanted "phantom keys" is quickly avoided.

The revolutionary design of BiLock cylinders has **reduced the number of components by up to fifty percent**. Assembly is quicker and more accurate and parts are less likely to be out of stock.

BiLock's **Quick Change Core** system allows quick and simple re-keying of doors **without the need for dismantling or even removing the cylinder**. BiLock can also provide a convenient Construction Core facility for convenience during building while maintaining the **security and integrity** of the designed master key suite.

All the latest generation Bilock cylinders may be supplied with Quick Change Cores.
